Hong Kong Monetary Authority Introduces Plans To Regulate Stablecoins

Client Alert | February 7, 2023

In January 2022, the Hong Kong Monetary Authority ("**HKMA**") issued a discussion paper inviting feedback on the regulatory approach towards crypto-assets and stablecoins ("**Discussion Paper**").[1] We previously published an alert on this topic.[2] Following a feedback period that ended on 31 March 2022, on 31 January 2023, the HKMA issued its '*Conclusions of the Discussion Paper on Crypto-assets and Stablecoins*' ("**Consultation Conclusions**"), which proposes the introduction of a stablecoin licensing regime.[3]

Recent events in the crypto market have highlighted the vulnerabilities of the crypto ecosystem, in particular, failures concerning the governance, stabilisation mechanisms, and transparency of crypto service providers. As a response to such failings, the HKMA's proposals mirror international efforts to regulate stablecoin-related activities; for example, in October 2022, the Monetary Authority of Singapore proposed measures to regulate the issuance of stablecoins.[4]

Under the HKMA's proposed licensing plans, the HKMA will give priority to regulating stablecoins that purport to reference one or more fiat currencies, irrespective of the intended use or underlying stabilisation mechanism of that stablecoin ("**In-Scope Stablecoins**"). This means that, in theory, stablecoins that reference fiat currencies through algorithms or arbitrage mechanisms fall under the scope of the HKMA's proposals. However, for reasons explained in Section I below, such stablecoins are, in practice unlikely to meet the HKMA's requirements for regulation and as such will most likely continue to be unregulated in the near term. That said, the HKMA has left the door open to expand its regime to allow for future regulation of other types of stablecoin structures.

To preserve flexibility in its regulatory scope, the HKMA will publish "guiding factors" in the future, setting out the factors the HKMA could have regard to in considering whether a particular structure should be declared as stablecoin subject to the HKMA's regulatory oversight.

I. Key Features of the Proposed Stablecoin Licensing Regime

The HKMA's proposals follow a risk-based "same risk, same regulation" approach. Rather than introducing a single type of license, the HKMA envisages introducing different licenses targeting different regulated activities. While the HKMA is still formulating the details to its requirements, the table below sets forth a summary of the proposed regulatory parameters of the proposed licensing regime:

Key activities to be regulated	The HKMA proposes to regulate the following critical functions:
	 Governance: establishment and maintenance of the rules governing an In-Scope Stablecoin arrangement;
	 Issuance: issuance, creation or destruction of In-Scope Stablecoins;
	• Stabilisation: stabilisation and reserve management arrangements of an In-Scope Stablecoin,

The significance of the requirement for a stablecoin arrangement to be asset-backed, effectively means		
		The significance of the requirement for a stablecoin arrangement to be asset-backed, effectively means

that stablecoins which derive their value based on arbitrage or algorithms are unlikely to be accepted under the proposed licensing regime. In other words, although such stablecoins qualify as In-Scope Stablecoins, the HKMA is unlikely to grant a licence for entities providing these stablecoin arrangements.

Further, the HKMA has specifically highlighted an on-going concern over the concentration risks in the current crypto market – e.g. where multiple or bundled financial services are provided by the same entity or affiliated companies. This give rise to user protection and conflict of interest risks. While the HKMA is still exploring regulatory options to address this vulnerability at this juncture, this area is expected to become a core regulatory focus in the near future.

The HKMA stresses that it envisages a flexible approach which allows the HKMA to "scope in" regulated activities and entities not strictly captured above under the licensing regime. Therefore, the proposals above should be seen as a visualization of the initial phase of the licensing regime. The HKMA has stated that it will be publishing assessment criteria and guiding principles to support its flexible approach. As such, if unregulated stablecoin related activities and/or unlicensed entities prove to be pose a greater and more imminent threat to Hong Kong's financial and monetary stability than currently anticipated, the HKMA is open to expanding the licensing regime to cover these activities and entities.

II. The Regulatory Position on Unbacked Crypto-Assets

In the Discussion Paper, the HKMA invited responses on whether it should regulate unbacked crypto assets, given their growing linkage with the mainstream financial system and risk to financial stability. Considering that responses on this point are varied, and in line with global regulatory trends, the HKMA has decided to put on hold any plans to regulated unbacked crypto-assets for the time being, and to instead focus on the regulation on stablecoins. That said, the HKMA will continue to monitor the risks posed by unbacked crypto-assets to Hong Kong's monetary and financial stability.

III. Next Steps in the Stablecoin Regulations Roadmap

The HKMA aims to put in place the stablecoin regulatory regime by 2023/24. This timeline takes into account the need to align Hong Kong's local regulatory regime with international recommendations and standards, which are expected to be released over the next one to two years.[5] In view of the cross-border nature of stablecoins, the HKMA has suggested possible cooperation and coordination among relevant financial regulators.

The proposed timeline will allow the HKMA to consider how the stablecoin licensing regime can fit into the broader virtual assets regulatory framework in Hong Kong and in particular, the licensing regime for virtual asset service providers ("**VASPs**") administered by the Securities and Futures Commission ("**SFC**"). The SFC's licensing regime for VASPs will come into effect on 1 June 2023. Please refer to our client alert on the particulars of the SFC's licensing regime.[6]

It appears likely that the stablecoin regulations will be introduced either in the form of an amendment to the Payment Systems and Stored Value Facilities Ordinance or as new, standalone legislation. The HKMA has not committed to a transitional period in its Consultation Conclusions. However, in light of the substantial number of responses seeking a transitional period to provide sufficient time for existing service providers to make necessary adjustments to their internal policies, procedures and controls to comply with new regulations, it is possible that the HKMA may consider including a transitional period in the future.

In conclusion, the HKMA's proposals represent a significant first step towards stablecoin regulation in Hong Kong. It is expected that the HKMA will be conducting further consultations to map out the particulars of the regulations. We will continue to closely monitoring this space and will provide further updates on future developments.
